

Michigan Center for Nursing Survey of Nurses 2007

Survey Instrument and Response Frequencies for Registered Nurses Employed in the Upper Peninsula Health Service Area

The Michigan Center for Nursing conducted the fourth annual survey of licensed nurses in 2007 to collect data on their employment status, geographic distribution, age, plans to continue practicing, work setting, practice area, education, gender, and racial/ethnic background. In the 2006 survey, questions were added related to nurses' decisions to leave a position in nursing and the factors that led to these decisions. This report presents the survey responses for registered nurses who entered an Upper Peninsula ZIP Code for their primary place of employment. A map of the health service areas can be found in the appendix for this report. Unless otherwise noted, response frequencies are for *active* nurses only, i.e., nurses who are working in nursing or a related area on a full-time or part-time basis.

There were 1,066 surveys returned from RNs employed in the Upper Peninsula health service area, yielding a margin of error of ± 1.5 percent with 95 percent confidence for data for RNs in this health service area. Comparison of data across different health service areas is not recommended because the number of responses and corresponding margin of error varies among health service areas.

The complete report, *Michigan Center for Nursing Survey of Nurses 2007*, presents findings for the Michigan population of nurses as a whole and is available online at www.michigancenterfornursing.org.
